Final Year Project Report (FYP2)

Commercialisation Proposal Guidelines (for Application-Based Projects):

The following topics can be included while writing the commercialisation proposal for application-based projects and this proposal has to be placed in the appendix of FYP2 report.

1. Executive Summary

Give a summary of the proposal in a specific and concise manner, which can be written after completing the other parts in the proposal.

2. Market Analysis

Identify the Target Customers/Customer Segment, who will be interested in the outcome of your project and also identify the competitors currently in this area of business.

3. Problem Statement

Describe the problems faced by the identified customer segment related to your project and also describe their needs.

4. Unique Value Proposition

A statement that specifies how the solution given in your project is different within the marketplace for the problems faced and also specify the strengths of your solution compared to other solutions currently available in the marketplace.

5. Objectives

Objectives of the proposal have to be identified in point form. It should be measurable and this will form the basis for the planned activities and outcome of the project.

6. Methods and Scope of Work

Discuss on how the chosen methods will satisfy the objectives and address the problems identified in the proposal. Discuss also on the solutions provided on your project and technologies to be used. Highlight the uniqueness and innovativeness of your solution. Outline also the scope of your work.

7. Business Model

Identify the successful business model by discussing the amount of revenue to be generated, amount of money to be spend on development, marketing and other aspects of the product and also by discussing on when the business can become profitable.

8. Milestones and Key metrics

Discuss on the milestones and activities, that can be measurable and estimate the time period of completion. Discuss on how the results will be evaluated/analyzed.

9. Project Outcome

Discuss on the successful outcome for the project

10. Strength, Weakness, Opportunity, and Threat (SWOT) analysis

Strengths:

Identification of the market segments and value proposition and how the solution will be unique within the marketplace.

Add any related strengths related to your project.

Weaknesses:

Identify any barriers to market entry (for example, capital requirements, technical barriers, patents, and process barriers) that the company needs to overcome.

Identify the inherent risks that need to be mitigated so that the business plan can be realized.

Add any related weaknesses related to your project.

Opportunities:

Identify the areas where the current market is underserved that can provide an opportunity.

Identify any key processes, intellectual capital, or other resources that can be used to take advantage in the marketplace.

Add any related opportunities related to your project.

Threats:

Identify the primary, secondary and potential future competitors (if applicable) that might affect the business plan.

Develop strategies for mitigating primary and secondary competitive threats.

Add any related threats related to your project.
